

551 Bradford Avenue
Westfield, New Jersey

Secretary of the Federal
Communications Commission
Washington, D.C.

Dear Sir:

During the first week of June we submitted to the F.C.C. 20 call letters for the Radio Station of Smith College, Northampton, Mass.

The Radio Station at Smith College is a wired wireless system. The radio transmitter is connected to the college lighting system which eliminates all radiation outside the college grounds. It is an educational station serving solely the 2500 students.

You wired me June 5 that the call letters were not available at that time. We ~~re-submitted~~ them during the first week of July and again during the second week of August. Neither time did we receive any reply from you. Since we will be ready to broadcast September 17, the call letters must be assigned by that time.

I am again submitting the same 20 call letters ranked according to preference in case previous correspondence is not available. Please wire me collect the call letters authorized before Sept.17.
